

AI Workshop: Use AI to respond to a real neighbourhood challenge

Using AI to make something genuinely useful for this neighbourhood.

This neighbourhood already benefits from strong community networks and local support. AI could build on these strengths by helping residents

- find support more easily
- discover relevant events, services, and opportunities
- navigate local systems
- make community communication clearer and more accessible.

Your task

1. **Identify one specific neighbourhood challenge** - Make it real and focused
2. **Design a solution using AI** - This could be a tool, workflow, or simple system
3. **Create an example output** - Show what your solution actually produces
4. **Make it reusable** - How could someone else use this?

Examples could be

- a weekly neighbourhood update
- a tool to summarise WhatsApp groups
- a guide to local services
- a way to help residents find support
- a simple communication or outreach system

Keep it simple

- **one clear problem** - pick something slightly annoying and real, not the biggest problem in the world.
- **one useful output** - what's the smallest version of this that would still be useful?
- something that could be tested quickly

Your goal

Create something that would genuinely help someone in this neighbourhood — and that others could use again.

Tool roles

🧠 Granola → Capture thinking

- messy ideas
- notes
- discussion

⚙️ ChatGPT → Build

- structure ideas
- create outputs
- generate first versions

✨ Claude → Improve

- refine clarity
- simplify
- make outputs more usable
